

## **Language and Social Justice**

**Abstract:** Negative views of non-standard varieties of a language have real-life consequences in a court of law. We begin with the premise that: "Justice may be blind, but it's not deaf" then relate it to two further premises: "Language is Identity" and "Identity and Health are interrelated." By the transitive function, we arrive at the further idea that: "Language and Health are interrelated." In sum, Language, Identity, and Health are social justice issues.
